Beating Cancer

It's easier than you think.

Some of our most common (and deadliest) cancers can be prevented or stopped early.

**Lung Cancer** causes more deaths than any other. More than 90% of lung cancer cases are caused by tobacco. So don't smoke or be around secondhand smoke.

When **Breast Cancer** is stopped early, there's a 99% survival rate. And no one should ever die of **Cervical Cancer**. Get screened! If you know someone who can't afford a mammogram or Pap test, call our Louisiana Breast & Cervical Health Program (LBCHP) at 888-599-1073 or go to www.lbchp.org

Everyone 40 and over should be screened for **Colorectal Cancer**, as it can be prevented and stopped early. Cajuns and African Americans get the disease more than others, so people in Louisiana really need to get screened and spread the word!

---

**Tobacco & Obesity = 4 of Top 5 Causes of Louisiana Death**

- Heart Disease
- Cancer
- Stroke
- Diabetes
