

## Patient Reminders

Breast Cancer Screening reminders are sent to clients annually, via text using the UpDox system. Once clients are scheduled for a mammogram they will then receive text reminders & be tracked by the referral coordinator.

## Provider Reminders

Providers are reminded of a client's need & eligibility for breast cancer screening by using the Wellness Visit Template checklist. The template ensures all eligible patients are screened & provided education.

## Patient Navigation

The referral coordinator monitors the completion of screening, notifies the provider of results, uploads chart records, follows up with patients, reschedules as needed, addresses barriers, and ensures the provider reviews the results with the patient.

ODYSSEY HOUSE LOUISIANA

## Community Health Center

Increasing Breast Cancer Screening & Follow-up in the New Orleans Community through Evidence-Based Intervention!

## How we did it!

OHL Community Health Center provides primary care services to underserved populations in the New Orleans community. Before their partnership with Screen Up their Breast Cancer Screening rate was **0%** due to their E.H.R limitations and inability to track patients. In their first year of partnership, the Screen Up team worked to determine a true baseline screening rate of **19.58%** by doing a chart review. Working together they established a workflow for tracking and referring patients for Breast Cancer Screening. The team implemented patient and provider reminders, along with patient navigation, increasing their screening rate to **57.48%**.

Under the direction of Helena Likaj, MPH- Director of Clinic, Prevention, and Pharmacy, Odyssey House Louisiana Community Health Center is dedicated to their clients and to increasing the overall breast cancer screening access within their community.
